# 1. Program Description:

A simple GUI application for face detection, using the laptop's webcam and drawing rectangles around faces facing the camera. The application is developed with Qt 5.5 with C++ and opencv 3.

The interface:

A simple two buttons' interface to capture and freeze the current captured view that looks initially:

## 2. The Software Design:

### 2.1 The class diagram of the code:

### 2.2 The detection part of the code (the slot/method `detect(Mat frame)`):

QImage `FaceDetector::detect(Mat frame)`

```
{
    Mat frame_gray;
    cvtColor(frame, frame_gray, COLOR_BGR2GRAY);
    equalizeHist(frame_gray, frame_gray);

    //Detection
    face_cascade.detectMultiScale(frame_gray,
                                  foundFaces,
                                  1.1, 2, 0|CASCADE_SCALE_IMAGE, Size(100, 100));

    int n = foundFaces.size();
    //Draw rectangles around faces
    CvRect rect;
    for(int i = 0; i < n ; i++)
    {
        rect = foundFaces[i];
        rectangle(frame, cvPoint(rect.x, rect.y),
                  cvPoint((rect.x + rect.width), (rect.y + rect.height)),
                  colorsCol[i%8]);
    }
}
```

```

// Convert Mat to QImage
QImage result = QImage((const uchar *)frame.data,
                        frame.cols,
                        frame.rows,
                        frame.step,
                        QImage::Format_RGB888).rgbSwapped();

return result;
}

```

## 2.3 Calling the detector from MainWindow using the timer connected to a slot:

```

void MainWindow::on_start_clicked()
{
    capture.open(-1);
    connect(intervalTimer, SIGNAL(timeout()), this, SLOT(capturing()));
    intervalTimer->start(33);
}

void MainWindow::capturing()
{
    capture.read(frame);
    QImage result = detector.detect(frame);
    QPixmap pixmap = new QPixmap(QPixmap::fromImage(result));
    scene = new QGraphicsScene(ui->graphicsView);
    scene->addPixmap(*pixmap);
    scene->setSceneRect(pixmap->rect());
    ui->graphicsView->setScene(scene);
}

```

### 3. The Program Running:

Test:
